Remote Touch Control Display 3,5“ for external operation, control and configuration

The FlexLine Remote Touch Control Display option (3.5" | 320 x 240 pixels) enables complete remote operation, control and configuration of our FlexLine steam generators from a distance. All settings and information that can be read out or executed directly on the device are therefore possible 1:1 remotely. This option is the optimum solution for convenient and reliable operability if the steam generator is difficult to access. The remote touch control display can also be quickly and easily integrated into a centralised remote desk.

The connection to the steam generator is established via Modbus RTU. This requires the 'Communication via Modbus' option. The housing complies with class IP65 and is therefore suitable for use in steam baths when mounted appropriately. A VESA 75 wall bracket is supplied for quick and clean surface mounting.

With clear advantages

- Complete remote operation, control and configuration
- Ideal solution for installations that are difficult to access and centralised remote desks
- IP65 housing - suitable for steam baths with appropriate installation
- Surface-mounted solution incl. VESA 75 wall bracket
